

LangChain 1.0 Technical Guide

LangChain 1.0 introduces several major changes:

- 1. New `init_chat_model()` API for unified model initialization
- 2. Middleware architecture for fine-grained execution control
- 3. Built on LangGraph runtime for persistence and streaming
- 4. Semantic versioning with API stability guarantees

API Migration Table

Old API (0.x)	New API (1.0)	Notes
ChatOpenAI()	init_chat_model()	Unified init
AgentExecutor	create_agent()	Simplified API
ConversationBuffer	InMemorySaver	Memory refactor
RetrievalQA	RAG Graph	Graph-based RAG

The migration from 0.x to 1.0 requires updating import paths and API calls. The `init_chat_model()` function supports multiple providers through a unified interface using the 'provider:model' format.
